

New LP Generator

7000 Surge Watts / 6000 Running Watts

Automatic fuel
shut-off safety valve
Operating noise <88 dB
Four AC 120V outlets

Propane fuel hose /
regulator included
Runs 8 hours @50% load
on 20 lbs of fuel

13 HP OHV engine
One AC 240V twist lock
outlet and One 12V DC
Includes mobility kit
EPA - CARB Approved

CARB
Approved

Meets Approval From The
California Air Resources Board

Now Available For Use In All
States, Including California

Propane
Tank Not
Included

Liquid Propane Generators Offer Clean Burning Fuel With Long Shelf Life & Safe Storage

- Propane generators are cleaner and can & be easier to use than gasoline generators.
- Propane burns cleaner than natural gas. Carbon monoxide emissions range between 20% - 40% lower.
- Gasoline spills contaminate and leave stains and odors; propane will dissipate into the air.
- A propane generator will start more easily in cold weather because the fuel will not gum up.
- Propane will not degrade, so you can keep several propane tanks on hand and store them for an unlimited amount of time. Gasoline has a more limited shelf life & deteriorates over time. Gasoline tends to go bad if it is not used in a timely manner.
